Solving Equations by Adding and Subtracting!

1. $x-6=14$

2. $-8=n-(-2)$
3. $17=b-3$
4. $8+x=-16$
5. $d+-5=2$

Solving Equations by Multiplying and Dividing!

1. $3 x=-24$

Opposite
Operation
2. $\frac{x}{-2}=-7 \quad$ 4. $\frac{x}{5}=-4$
3. $-4 x=-24$
5. $2.7 x=-18$

Reciprocals create something called $\qquad$ ． $\qquad$

$$
\frac{2}{3} \times \frac{3}{2}=\frac{6}{6}=\square
$$

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\longrightarrow$
$\qquad$

Use Reciprocals to solve．

$$
\frac{2}{5} x=-2 \quad \frac{-2 x}{3}=-24
$$

## Unit 2.1.notebook

## Story Problems.

You purchased 8 earbuds for all your friends for Christmas and paid $\$ 104$. How much did each pair cost?

1. Define your variable. What don't we know?
2. Write equation. What operation?
3. Solve. How do we isolate the variable? $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

On Tuesday you purchased 6 tickets for you and your friends to go to the new Star Wars Rogue One movie. On Wednesday $\qquad$ you bought even more tickets. If you bought 13 tickets total, how many did you buy on Wednesday? $\qquad$

1. Define your variable. What don't we know?
2. Write equation. What operation?
3. Solve. How do we isolate the variable?
