

## Properties of

 Transformations$\qquad$

Today's Learning Targets:
3.5 I can verify that after rigid motion, that lines and line segments remain the same length, corresponding angles
$\qquad$ have the same measure, and parallel lines remain parallel. $\qquad$

$\qquad$

## RIGID MOTIONS

( (-_)
A rigid motion moves a figure in some way without changing the shape or size.

Unit 3 - Transformations: 3.5

Identify the Transformation

- Translation (Slide),
- Rotation (Turn) $\}$ or a combination of several
- Reflection (Flip) J

Pre-Image

Pre-Image Image

Perform the following transformations to Triangle XYZ. Each transformation is performed on the previous transformation.
A) Reflect over the x-axis.
B) Rotate it $90^{\circ}$ clockwise around the origin.
C) $(x, y) \rightarrow(x-3, y)$
