

Unit 5 - 5.9

Re-arrange to
Slope Intercept Form

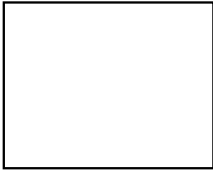

$$y = mx + b$$

Today's Learning Targets:

5.9 - I can rearrange an equation into slope-intercept form.

Slope Intercept Form

$$y = mx + b$$

What is the identifying characteristic of slope intercept form?

Get "y" by itself

$$y + 2 = 4x$$

$$y = mx + b$$

Get "y" by itself

$$3x + y = -5$$

$$y = mx + b$$

Get "y" by itself

$$y - \frac{1}{2}x = 2$$

$$y = mx + b$$
